Project Name	Auto Ticket Classification using FLOW DESIGNER
Maximum Marks	2 Marks

Customer Problem Statement Template

A customer problem statement is used to understand the difficulties faced by service desk users and support teams during the ticket-handling process. In the Auto Ticket Classification project, the main focus is on problems caused by manual ticket classification, incorrect routing, inconsistent prioritization and delayed handling. The project aims to identify these problems from the customer's/support user's point of view before defining the automated solution.

Problem Statement – PS-1

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A service desk support agent	Quickly classify incoming support tickets and send them to the correct technical team	I have to manually review, categorize and route each ticket	Tickets need to be checked individually and manual classification can result in delays and routing errors	Frustrated and overloaded

PS-1 Explanation

The support agent needs to process incoming tickets efficiently, but manual review and routing consume time and can lead to incorrect assignment. The project documentation identifies manual triage as a source of operational latency, routing inaccuracies and increased workload.

Problem Statement – PS-2

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-2	A customer/service requester	Get my support issue handled by the appropriate team with the correct priority	My ticket may be incorrectly categorized, prioritized or routed	Manual evaluation can cause inconsistent priority decisions and unnecessary ticket handoffs	Anxious and dissatisfied

PS-2 Explanation

A service requester expects the submitted issue to reach the appropriate support team without unnecessary delays. The project specifically addresses inconsistent prioritization, misrouting and delays affecting high-priority incidents.

Final Problem Statements

PS-1

I am a service desk support agent. I'm trying to quickly classify and route incoming tickets to the correct support team, but I have to manually review and categorize each ticket because the existing process depends on manual triage, which makes me feel frustrated and overloaded.

PS-2

I am a customer/service requester. I'm trying to get my support issue handled by the appropriate team with the correct priority, but my ticket may be incorrectly categorized or routed because manual evaluation can result in inconsistent prioritization and unnecessary handoffs, which makes me feel anxious and dissatisfied.
