Empathy Map Canvas

An empathy map is used to understand the experiences, behaviours, challenges and expectations of users who interact with the service desk ticketing process.

For this project, the primary user perspective is considered from a Service Desk Support Agent / Customer Service User who is affected by manual ticket classification, prioritization and routing.

The purpose is to understand what the user thinks and feels, hears, sees, says and does, along with their pain points and expected gains, before designing the automated Flow Designer solution. This follows the structure of the provided sample.
