

Project Design Phase-II

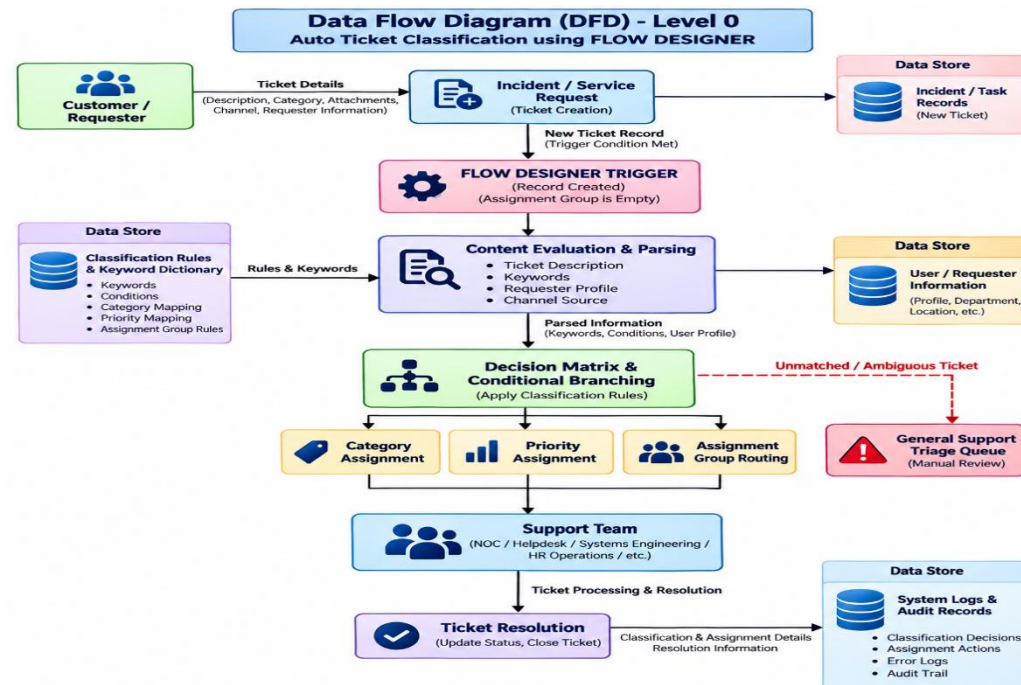

Data Flow Diagram & User Stories

Date	03 October 2026
Team ID	SWTID-2026-8726
Project Name	Auto Ticket Classification using FLOW DESIGNER
Maximum Marks	4 Marks

Data Flow Diagrams

A Data Flow Diagram (DFD) represents how information moves through the Auto Ticket Classification using FLOW DESIGNER system. It shows how a support ticket enters the system, how the ticket information is evaluated and classified, how the appropriate category, priority and assignment group are determined, and how the processed ticket is routed to the support team.

The system receives newly created incident or service-request records and evaluates information such as the ticket description, requester profile and channel source. Flow Designer then applies conditional rules to classify and route the ticket.

User Stories

The following user stories are structured using the same fields as the provided sample: User Type, Functional Requirement (Epic), User Story Number, User Story / Task, Acceptance Criteria, Priority and Release.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Customer / Requester	Ticket Submission	USN-1	As a requester, I can submit an incident or service request with the required ticket details.	Ticket record is successfully created.	High	Sprint-1
Service Desk Agent	Automatic Trigger	USN-2	As a service desk agent, I want the classification flow to start automatically when a new ticket is created.	Flow is triggered when a new ticket is created and assignment group is empty.	High	Sprint-1
Service Desk Agent	Content Evaluation	USN-3	As a service desk agent, I want the system to analyze the ticket description and relevant requester information.	Ticket content and requester information are evaluated by the workflow.	High	Sprint-1
Service Desk Agent	Ticket Classification	USN-4	As a service desk agent, I want the system to identify the appropriate ticket category using predefined keywords and conditions.	Matching keywords/conditions result in the appropriate category.	High	Sprint-1
Service Desk Agent	Priority Assignment	USN-5	As a service desk agent, I want the system to automatically determine the ticket priority.	Appropriate priority level is assigned according to the configured rules.	High	Sprint-1
Support Team	Automatic Routing	USN-6	As a support team member, I want tickets to be automatically assigned to the appropriate support group.	Classified ticket is routed to the configured assignment group.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Service Desk Agent	Conditional Routing	USN-7	As a service desk agent, I want different ticket conditions to follow different Flow Designer branches.	Matching conditions execute the correct branch and action.	High	Sprint-2
Service Desk Agent	Fallback Handling	USN-8	As a service desk agent, I want unmatched tickets to be sent to a General Support Triage Queue.	Unmatched tickets are routed to the fallback queue instead of being dropped.	High	Sprint-2
Service Desk Supervisor	Classification Notification	USN-9	As a supervisor, I want to receive a notification when a ticket cannot be automatically classified.	Classification anomaly generates a notification for manual review.	Medium	Sprint-2
Service Desk Administrator	Error Handling	USN-10	As an administrator, I want workflow and database errors to be logged without stopping the overall system.	Error information is captured in system logs.	High	Sprint-2
Service Desk Administrator	Audit Trail	USN-11	As an administrator, I want classification and assignment actions to be recorded for auditing.	Classification decisions and assignment actions are logged.	Medium	Sprint-2
Service Desk Administrator	Rule Maintenance	USN-12	As an administrator, I want to modify classification rules through Flow Designer without rebuilding the complete system.	Rules can be maintained through the visual workflow configuration.	Medium	Sprint-3

The first implementation stories are directly supported by the project's documented trigger, content evaluation, conditional branching, category assignment, priority assignment and routing design

Future Enhancement User Stories

The project also identifies future enhancements including Machine Learning Integration, Sentiment Analysis, Multi-Language Support and Dynamic Load Balancing.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Machine Learning	USN-13	As an administrator, I want predictive classification using historical ticket data.	System can classify tickets based on learned patterns.	Low	Sprint-4
Service Desk Supervisor	Sentiment Analysis	USN-14	As a supervisor, I want customer sentiment to be considered during ticket prioritization.	Sentiment information can influence escalation rules.	Low	Sprint-4
Customer / Requester	Multi-Language Support	USN-15	As a requester, I want tickets submitted in different languages to be classified.	Supported languages can be processed and classified.	Low	Sprint-5
Service Desk Administrator	Dynamic Load Balancing	USN-16	As an administrator, I want tickets to consider agent availability and workload during assignment.	Tickets can be distributed based on available support capacity.	Low	Sprint-5
User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Machine Learning	USN-13	As an administrator, I want predictive classification using historical ticket data.	System can classify tickets based on learned patterns.	Low	Sprint-4
Service Desk Supervisor	Sentiment Analysis	USN-14	As a supervisor, I want customer sentiment to be considered during ticket prioritization.	Sentiment information can influence escalation rules.	Low	Sprint-4
Customer / Requester	Multi-Language Support	USN-15	As a requester, I want tickets submitted in different languages to be classified.	Supported languages can be processed and classified.	Low	Sprint-5

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Service Desk Administrator	Dynamic Load Balancing	USN-16	As an administrator, I want tickets to consider agent availability and workload during assignment.	Tickets can be distributed based on available support capacity.	Low	Sprint-5
User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Machine Learning	USN-13	As an administrator, I want predictive classification using historical ticket data.	System can classify tickets based on learned patterns.	Low	Sprint-4
Service Desk Supervisor	Sentiment Analysis	USN-14	As a supervisor, I want customer sentiment to be considered during ticket prioritization.	Sentiment information can influence escalation rules.	Low	Sprint-4
